Portfolio: [matthewcuan.com](https://matthewcuan.com)

## Education

---

**Georgia Institute of Technology** Atlanta, Georgia

Expected Graduation: 2027

- M.S. Computer Science (OMSCS), specialization in Artificial Intelligence

**University of California, Berkeley** Berkeley, California

Graduated May 2022

- B.A. Integrative Biology
- Relevant Coursework: Data Structures, Software Engineering, Computational Structures in Data Science

## Skills, Certifications, & Clearances

---

- **Languages:** Python, C#, JavaScript, Java, C++, SQL
- **Frameworks/Libraries:** .NET, pandas, NumPy, Bootstrap
- **Cloud & Infrastructure:** AWS, Jenkins CI/CD, nginx, Linux, Remote Procedure Calls
- **Data & Backend:** REST APIs, SQL databases, LDAP/Active Directory
- **Clearances:** US Secret Security Clearance
- **Certifications:** CompTIA Security+ Certification

## Work Experience

---

**90meter Inc**

June 2023 - Present

**Lead Software Engineer**, 2025 - Present

- Own Windows smart card middleware across minidriver, desktop app, service, and token management for 1.5M+ endpoints
- Ship weekly release candidates and customer-targeted production builds, owning release validation, QA handoff, and escalations
- Reduced support ticket volume by ~40% by automating deployment workflows, standardizing QA/support documentation, and release process improvements
- Built Jenkins CI/CD pipeline automating build, testing, deployment, versioning, and QA handoff, reducing development-to-test turnaround by 70%
- Prototyped a PQC applet to evaluate next-generation cryptographic standards for smart card systems
- Technically led 3 engineers across middleware development, PR review, mentoring, release decisions, QA triage, and customer-facing escalations
- **Technologies:** C#, C++, Java, .NET Framework 4.8, WinForms, Jenkins, Remote Procedure Calls

**Software Engineer**, 2023 - 2025

- Built and maintained 100+ Python REST API endpoints for enterprise PKI workflows across certificate issuance, token lifecycle management, audit, inventory, and reporting
- Integrated SQL databases, LDAP/Active Directory, X.509 certificate parsing, RBAC, and audit logging for secure certificate and token lifecycle workflows
- Delivered an operator-facing web dashboard with searchable PKI inventory, audit/reporting views, PDF export tooling, and automated Python regression tests
- Enhanced non-domain Windows smart card authentication software by adding workflows to view and remove certificate-to-user associations
- **Technologies:** Python, JavaScript, SQL, LDAP/Active Directory, nginx, Linux

## Projects

---

**Machine Learning Trading Strategy Platform**

January - May 2026

- Built a Python-based trading analytics platform using pandas, NumPy, and ML models to process historical market data and simulate portfolio strategies
- Designed modular pipelines for data ingestion, strategy evaluation, and portfolio backtesting
- Deployed data processing and backtesting workloads on AWS for scalable, on-demand compute
- Evaluated strategy performance using Sharpe ratio, volatility, and risk-adjusted return metrics
- **Technologies:** Python, Numpy, pandas, ML algorithms (Q-Learner, Decision Trees, KNN)
